XProtect[®] Smart Wall key features and benefits

Add-on video wall	The XProtect Smart Wall is an advanced add-on video wall product that provides supreme situation awareness in larger surveillance centers through its unique flexibility and hardware independence.
<i>Feature benefit:</i>	<i>High efficiency and increased actionable response.</i>
Powerful situation management	It is easy to populate layouts by using the video wall builder. You have dynamic control of the layout and content is easily added by dragging and dropping cameras into the monitor views. Set up rules to handle events, configure views to gain exceptional situational awareness.
<i>Feature benefit:</i>	<i>Efficient and instant handling of incidents.</i>
Seamless integration	Video wall is an add-on solution that integrates seamlessly with the XProtect Corporate surveillance platform and the client viewer.
<i>Feature benefit:</i>	<i>Flexible solution with no need for additional installation.</i>
High scalability	Any combination of monitors in one video wall, any numbers of video walls in the system, any physical location of the video wall.
<i>Feature benefit:</i>	<i>Increased usability and flexibility.</i>
Hardware independent	The video wall uses standard servers and displays allowing you to configure your system freely and at a low cost.
<i>Feature benefit:</i>	<i>Cost-efficient and easy to deploy.</i>
Powered by the client viewer	No need for any separate applications since operation of the video wall is fully integrated with the client viewer.
<i>Feature benefit:</i>	<i>Cost-efficient and flexible solution.</i>

Administrated by the system manager	The video wall is conveniently managed from within the system manager.
--	--

<i>Feature benefit:</i>	<i>Increased usability.</i>
-------------------------	-----------------------------

Flexible video wall layout	An intuitive layout builder allows you to define the number, size and position of monitors.
-----------------------------------	---

<i>Feature benefit:</i>	<i>High usability and flexibility.</i>
-------------------------	--

View presets	For each video wall one or several presets can be defined; such as view layout (grid) and actual content/camera. The preset layouts are easily populated by drag and drop of cameras or by using the powerful rules engine.
---------------------	---

<i>Feature benefit:</i>	<i>Increased usability.</i>
-------------------------	-----------------------------

Powerful rules engine	Rules can be defined to control the layout and content automatically on events such as: motion detection, input/output triggers, time or video analytics events.
------------------------------	--

<i>Feature benefit:</i>	<i>Greater efficiency and instant situational awareness.</i>
-------------------------	--

Fully integrated with client viewer	The operator views the video wall as part of the available view selection.
--	--

<i>Feature benefit:</i>	<i>Flexible and high situational awareness.</i>
-------------------------	---

Controlled user rights	All user actions are subject to applicable user rights.
-------------------------------	---

<i>Feature benefit:</i>	<i>Increased security and flexibility, as individual rights can be defined.</i>
-------------------------	---

<i>Automated incident handling</i>	Using rules, incidents can be projected to central areas of the video wall for further operator attention.
---	--

<i>Feature benefit:</i>	<i>High instant situational awareness.</i>
-------------------------	--

<i>Flexible view handling</i>	As with other views in the client viewer, the operator can control content and layout (subject to user rights).
--------------------------------------	---

<i>Feature benefit:</i>	<i>High flexibility and easy to deploy.</i>
-------------------------	---
